Day 12 – Search Feature Implementation and Poster Design

1. Objective of the Day

The objective of the day was to implement search functionality for notes and continue designing posters for live projects.

2. Tasks Performed

- Implemented search functionality based on note titles
- Enabled dynamic filtering of notes as users type
- Integrated search logic with Firestore data
- Ensured fast and accurate retrieval of relevant notes
- Tested search functionality with different keywords
- Verified proper filtering of notes in real-time
- Designed posters for live projects using Canva
- Improved layout clarity and alignment in poster designs
- Applied consistent visual styles across multiple posters

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- Canva

4. Key Learnings

- Search functionality improves user experience in data-heavy applications
- Efficient filtering helps users access data quickly
- Real-time search enhances usability
- Proper data handling ensures accurate results
- Canva helps maintain professional design consistency

5. Challenges Faced

- Implementing efficient search logic for dynamic data
- Ensuring accurate filtering without performance issues

6. Solutions

- Optimized search logic for faster filtering
- Tested search functionality with multiple scenarios

7. Conclusion

- Successfully implemented search feature for notes
- Continued improving poster designs with better visual consistency
