6 Months Training TR-104 Full Stack Development

April, 2026

Day 1 – Project Setup and Initial Poster Design

1. Objective of the Day

The objective of the day was to set up the foundation of the CollabNest project and begin designing posters for live projects.

2. Tasks Performed

- Installed Angular CLI and created a new Angular project with routing
- Configured project using NgModule-based architecture
- Organized folder structure for better scalability and maintainability
- Installed Angular Material for UI components
- Verified successful execution of Angular application
- Designed initial posters for live projects using Canva
- Selected suitable templates and customized layouts
- Exported posters in required formats

3. Tools / Technologies Used

- Angular Framework
- Angular CLI
- Angular Material
- Canva

4. Key Learnings

- NgModule-based architecture helps organize large applications

- Proper project setup ensures smooth development workflow
- Angular Material simplifies UI implementation
- Canva enables quick and professional poster design
- Clean structure improves maintainability

5. Challenges Faced

- Structuring project correctly using NgModules
- Selecting appropriate poster layouts based on project needs

6. Solutions

- Followed structured approach for module-based architecture
- Explored and refined Canva templates before finalizing designs

7. Conclusion

- Successfully set up CollabNest project using NgModule architecture
- Created initial posters for live projects
