Day 10 – Permissions System Implementation and Poster Design

1. Objective of the Day

The objective of the day was to implement a permissions system for shared notes and continue designing posters for live projects.

2. Tasks Performed

- Implemented role-based permissions for shared notes (Viewer / Editor)
- Restricted editing access based on assigned user roles
- Ensured viewers can only read notes without modifying them
- Allowed editors to update shared notes
- Updated Firestore data structure to support role-based access
- Tested permission functionality with multiple users
- Verified correct behavior of viewer and editor roles
- Designed posters for live projects using Canva
- Improved consistency in color schemes and typography
- Applied refinements to layout and visual elements

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire

- Canva

4. Key Learnings

- Role-based permissions enhance application security
- Access control is important in collaborative systems
- Firestore supports structured permission management
- Proper role assignment ensures controlled data access
- Canva helps maintain consistent visual branding

5. Challenges Faced

- Implementing role-based access without affecting existing functionality
- Ensuring correct restriction of editing features

6. Solutions

- Structured data to include user roles in shared notes
- Tested different user roles to verify permission behavior

7. Conclusion

- Successfully implemented role-based permissions system
- Continued improving poster designs with consistent styling
