Day 13 – Version History Implementation and Poster Design

1. Objective of the Day

The objective of the day was to implement version history functionality for notes and continue designing posters for live projects.

2. Tasks Performed

- Implemented logic to save different versions of notes during updates
- Stored previous versions of notes in Firestore
- Enabled tracking of changes made to notes over time
- Implemented functionality to restore previous versions of notes
- Ensured version data is properly linked with original notes
- Tested version history by making multiple edits to notes
- Verified correct restoration of previous note versions
- Designed posters for live projects using Canva
- Improved layout balance and visual clarity in poster designs
- Maintained consistency in fonts and color schemes

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire

- Canva

4. Key Learnings

- Version history improves data safety and user control
- Tracking changes is important in collaborative applications
- Firestore can store historical data efficiently
- Restore functionality enhances usability
- Canva helps maintain consistent visual quality

5. Challenges Faced

- Managing storage of multiple note versions efficiently
- Ensuring correct restoration without data loss

6. Solutions

- Structured version data separately in Firestore
- Tested version restore functionality with multiple scenarios

7. Conclusion

- Successfully implemented version history feature
- Continued improving poster designs with better visual structure
