Day 15 – Notifications System and Poster Design

1. Objective of the Day

The objective of the day was to implement in-app notifications for user activities and continue designing posters for live projects.

2. Tasks Performed

- Implemented notification system for actions such as note sharing and updates
- Stored notification data in Firestore
- Displayed notifications in the user interface
- Ensured users receive updates for relevant activities
- Linked notifications with specific user actions
- Tested notification triggers for different scenarios
- Verified correct display and timing of notifications
- Designed posters for live projects using Canva
- Improved visual balance and layout alignment in designs
- Maintained consistency in color themes and typography

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire

- Canva

4. Key Learnings

- Notifications improve user engagement and awareness
- Event-based updates enhance user experience
- Firestore supports dynamic notification storage
- Linking notifications with actions ensures relevance
- Canva helps maintain visual consistency across designs

5. Challenges Faced

- Triggering notifications correctly for different actions
- Managing display of multiple notifications without clutter

6. Solutions

- Structured notification data based on user actions
- Tested notification flow with different scenarios

7. Conclusion

- Successfully implemented notifications system
- Continued improving poster designs with consistent styling
