Day 17 – Firestore Security Rules and Poster Design

1. Objective of the Day

The objective of the day was to implement Firestore security rules to protect application data and continue designing posters for live projects.

2. Tasks Performed

- Studied Firestore security rules for data protection
- Implemented rules to restrict unauthorized access to data
- Ensured users can only access their own notes and shared data
- Applied role-based access restrictions for shared notes
- Tested security rules with different user accounts
- Verified that unauthorized users cannot access restricted data
- Designed posters for live projects using Canva
- Improved alignment and visual consistency in poster layouts
- Applied consistent color schemes and typography

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- Canva

4. Key Learnings

- Security rules are essential for protecting user data
- Proper access control prevents unauthorized operations
- Firestore provides flexible rule-based security
- Testing security rules ensures application safety
- Canva helps maintain consistent and professional design

5. Challenges Faced

- Writing correct security rules for different access scenarios
- Ensuring no unauthorized data access while maintaining functionality

6. Solutions

- Tested rules with multiple user roles and scenarios
- Refined rules based on observed behavior

7. Conclusion

- Successfully implemented Firestore security rules
- Continued improving poster designs with consistent styling
