6 Months Training TR-104 Full Stack Development

January, 2026

Day 8 – Live Project Testing and Validation

1. Objective of the Day

The objective of the day was to gain real-world exposure by assisting in testing and validation of a live web application from both user and admin perspectives.

2. Tasks Performed

- Tested a live website under the guidance of a supervisor
- Verified page loading and navigation across different sections
- Checked routing behavior between pages
- Ensured correct redirection of links
- Evaluated UI layout and user experience
- Performed admin panel testing
- Added dummy data through admin forms
- Verified data reflection on the user-facing website
- Checked data storage and retrieval consistency
- Validated content accuracy and formatting
- Followed instruction-based testing using provided documentation
- Reported identified issues and inconsistencies

3. Tools / Technologies Used

- Web Browser

- Live Web Application
- Admin Panel Interface

4. Key Learnings

- Understood real-world testing workflows
- Learned to test applications from both user and admin perspectives
- Gained experience in validating routing and navigation
- Understood importance of data consistency between backend and frontend
- Learned how to identify and report issues effectively

5. Challenges Faced

- Identifying subtle UI and data-related issues
- Understanding expected behavior of all features

6. Solutions

- Followed testing instructions carefully
- Verified each functionality step-by-step

7. Conclusion

- Successfully performed testing and validation of a live project
- Gained practical exposure to real-world quality assurance processes
