6 Months Training TR-104 Full Stack Development

April, 2026

Day 2 – Firebase Integration and Poster Design

1. Objective of the Day

The objective of the day was to integrate Firebase with the Angular application and continue designing posters for live projects.

2. Tasks Performed

- Created a Firebase project using Firebase Console
- Connected Angular application with Firebase configuration
- Integrated Firebase services into the Angular project
- Set up Firebase Authentication and Firestore database
- Verified successful connection between Angular and Firebase
- Tested basic Firebase functionality within the application
- Designed posters for live projects using Canva
- Customized layouts, fonts, and color schemes based on project requirements
- Exported finalized posters in required formats

3. Tools / Technologies Used

- Angular Framework
- Firebase
- AngularFire
- Canva

4. Key Learnings

- Firebase provides backend services like authentication and database
- AngularFire enables smooth integration with Firebase
- Proper configuration is required for successful integration
- Backend connectivity is essential for dynamic applications
- Canva helps in creating visually appealing designs efficiently

5. Challenges Faced

- Configuring Firebase correctly with Angular application
- Ensuring proper connection without runtime errors

6. Solutions

- Followed step-by-step Firebase integration process
- Verified configuration and tested functionality after setup

7. Conclusion

- Successfully integrated Firebase with Angular application
- Continued designing posters with improved design consistency
