Day 10 – Authentication Flow Testing and Validation

1. Objective of the Day

The objective of the day was to test the complete authentication system and validate all authentication flows within the application.

2. Tasks Performed

- Tested signup functionality with multiple user inputs
- Verified login functionality using valid and invalid credentials
- Tested Google Sign-In flow
- Validated authentication state after login
- Checked navigation behavior after authentication
- Verified logout functionality
- Tested error handling for invalid inputs
- Ensured consistent UI behavior across all authentication flows
- Identified and fixed minor issues during testing

3. Tools / Technologies Used

- Angular Framework
- Firebase Authentication
- AngularFire
- Web Browser

4. Key Learnings

- Testing ensures reliability of authentication systems
- All authentication flows must work seamlessly together
- Error handling is critical for user experience
- Consistency in UI behavior is important
- Validation improves system stability

5. Challenges Faced

- Identifying edge cases in authentication flow
- Ensuring consistency across different login methods

6. Solutions

- Performed multiple test scenarios
- Refined logic based on testing results

7. Conclusion

- Successfully validated complete authentication system
- Ensured smooth and reliable authentication flow
