6 Months Training TR-104 Full Stack Development

April, 2026

Day 4 – Route Protection and Poster Design

1. Objective of the Day

The objective of the day was to implement route protection in the application and continue designing posters for live projects.

2. Tasks Performed

- Implemented authentication guards to protect application routes
- Restricted access to dashboard and notes pages for unauthorized users
- Configured routing to redirect users to login page when not authenticated
- Integrated route guards with authentication service
- Tested navigation flow between protected and public routes
- Verified secure access after login and logout
- Designed posters for live projects using Canva
- Improved layout consistency and alignment in designs
- Applied color schemes and typography for better visual appeal

3. Tools / Technologies Used

- Angular Framework
- Angular Routing
- Firebase Authentication
- AngularFire

- Canva

4. Key Learnings

- Route guards ensure secure navigation in applications
- Authentication state controls access to different routes
- Proper routing improves user experience
- Security is an essential part of application development
- Canva helps maintain consistent and professional design output

5. Challenges Faced

- Implementing route guards correctly with authentication logic
- Ensuring users cannot access protected routes without login

6. Solutions

- Integrated guard logic with authentication service
- Tested multiple navigation scenarios to verify protection

7. Conclusion

- Successfully implemented route protection for secure navigation
- Continued improving poster designs with better visual structure
