Day 6 – Notes Editing and Auto-Save Feature with Poster Design

1. Objective of the Day

The objective of the day was to implement note editing functionality with auto-save feature and continue designing posters for live projects.

2. Tasks Performed

- Implemented edit functionality to update existing notes
- Enabled users to modify note content dynamically
- Integrated auto-save feature to update notes automatically in Firestore
- Ensured real-time syncing of updated note data
- Tested editing and auto-save behavior across different scenarios
- Verified data consistency after multiple updates
- Designed posters for live projects using Canva
- Enhanced visual consistency across different poster designs
- Refined layouts, spacing, and typography for better presentation

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- Canva

4. Key Learnings

- Editing functionality improves usability of note systems
- Auto-save enhances user experience by reducing manual actions
- Real-time updates ensure data consistency across sessions
- Firestore supports seamless data updates
- Canva helps improve design quality with consistent styling

5. Challenges Faced

- Implementing auto-save without affecting performance
- Ensuring data updates correctly without overwriting unintended content

6. Solutions

- Tested update logic carefully with multiple edits
- Verified Firestore updates to ensure correct data saving

7. Conclusion

- Successfully implemented note editing and auto-save functionality
- Continued improving poster designs with refined visual elements
