

6 Months Training TR-104 Full Stack Development

May, 2026

Day 10 – Final Documentation and Project Completion

1. Objective of the Day

The objective of the day was to finalize project documentation, verify deployed functionality, and complete all remaining tasks related to the CollabNest application.

2. Tasks Performed

- Reviewed all implemented features of the application
- Verified authentication, notes management, sharing, and collaboration modules
- Checked deployed application functionality and stability
- Documented project architecture and feature workflow
- Organized project files and implementation records
- Reviewed security rules and deployment configurations
- Performed final validation of application functionality
- Ensured project readiness for future maintenance and enhancements

3. Tools / Technologies Used

- Angular Framework
- Firebase
- Firebase Firestore
- AngularFire

4. Key Learnings

- Proper documentation improves maintainability of software projects

- Final verification helps ensure application stability
- Organized project structure simplifies future development
- Documentation is an important part of software delivery
- Systematic review helps identify overlooked issues

5. Challenges Faced

- Reviewing all project modules comprehensively
- Ensuring complete documentation of implemented features

6. Solutions

- Conducted module-wise verification of application features
- Organized documentation according to project functionality

7. Conclusion

- Successfully completed documentation and final project review
- Confirmed readiness of the CollabNest application for deployment and future use
