6 Months Training TR-104 Full Stack Development

February, 2026

Day 9 – Google Sign-In Integration

1. Objective of the Day

The objective of the day was to implement Google Sign-In functionality and understand third-party authentication using Firebase.

2. Tasks Performed

- Enabled Google authentication in Firebase console
- Configured Google authentication provider in the application
- Integrated Google Sign-In using Firebase authentication services
- Implemented popup-based authentication flow
- Allowed users to sign in using their Google accounts
- Handled authentication response after successful login
- Redirected users to the application after Google login
- Ensured proper UI feedback during authentication process
- Tested Google Sign-In functionality

3. Tools / Technologies Used

- Angular Framework
- Firebase Authentication
- AngularFire
- Google Authentication Provider

- TypeScript

4. Key Learnings

- Firebase supports third-party authentication providers
- Google Sign-In simplifies user login process
- Popup-based authentication improves user experience
- Firebase handles secure authentication with external providers
- Third-party login enhances accessibility of applications

5. Challenges Faced

- Configuring Google authentication correctly
- Handling authentication popup and response

6. Solutions

- Followed Firebase configuration steps carefully
- Tested authentication flow multiple times

7. Conclusion

- Successfully implemented Google Sign-In functionality
- Enabled third-party authentication in the application
