6 Months Training TR-104 Full Stack Development

January, 2026

Day 1 – Environment Setup and Introduction to Angular

1. Objective of the Day

The objective of the day was to set up a complete development environment and gain an introductory understanding of Angular as a modern front-end framework.

2. Tasks Performed

- Installed and verified Node.js and npm on the system
- Installed Angular CLI using npm for project creation and management
- Created a new Angular project using official Angular documentation
- Explored the role of Angular CLI commands such as ng serve
- Set up Visual Studio Code as the development environment
- Used the integrated terminal for running Angular commands

3. Tools / Technologies Used

- Node.js
- npm (Node Package Manager)
- Angular CLI
- Visual Studio Code

4. Key Learnings

- Angular is a TypeScript-based framework developed by Google
- It is used for building dynamic, single-page web applications
- Angular follows a structured and scalable development approach

- Angular CLI simplifies project setup and development workflow
- Development server helps in real-time application preview

5. Challenges Faced

- Initial confusion while configuring Angular CLI and project setup
- Understanding command-line workflow for Angular development

6. Solutions

- Followed official Angular documentation step-by-step
- Practiced CLI commands multiple times for clarity

7. Conclusion

- Successfully created and executed a working Angular project
- Established a stable and professional development environment
