Day 14 – Firebase Setup and Angular Integration

1. Objective of the Day

The objective was to integrate Firebase with the Angular application and configure authentication services for real-world backend support.

2. Tasks Performed

- Created a Firebase project
- Enabled Email/Password authentication in Firebase console
- Integrated Firebase with Angular using AngularFire
- Configured Firebase services in Angular application
- Managed compatibility between Angular version and Firebase libraries
- Verified successful Firebase connection without runtime errors
- Tested initial authentication setup

3. Tools / Technologies Used

- Angular Framework
- Firebase
- AngularFire
- TypeScript

4. Key Learnings

- Firebase provides backend services for authentication and data storage
- AngularFire simplifies Firebase integration in Angular

- Proper configuration is required to avoid runtime errors
- Firebase can be used to build real-world applications

5. Challenges Faced

- Configuration issues between Angular and Firebase
- Understanding Firebase setup process

6. Solutions

- Followed official Firebase and AngularFire documentation
- Verified configuration step-by-step

7. Conclusion

- Successfully integrated Firebase with Angular application
- Established backend support for authentication
