

6 Months Training TR-104 Full Stack Development

May, 2026

Day 18 – Initial Testing and Content Validation

1. Objective of the Day

The objective of the day was to perform initial testing of the Hanora website and validate the content, functionality, and user experience across all developed pages.

2. Tasks Performed

- Tested navigation between Home, About, Courses, and Contact pages
- Verified correct rendering of content across different sections of the website
- Reviewed page layouts for responsiveness and visual consistency
- Validated functionality of the Home Page pop-up form
- Checked content accuracy and alignment with project requirements
- Assisted in identifying UI inconsistencies and content-related issues
- Coordinated with senior developers regarding observations and improvements

3. Tools / Technologies Used

- Angular Framework
- Angular Material
- Visual Studio Code
- Web Browser

4. Key Learnings

- Testing is essential for ensuring website reliability and usability
- Content validation helps maintain accuracy and consistency

- Early identification of issues simplifies future improvements
- User experience depends on both functionality and presentation
- Collaborative testing improves overall project quality

5. Challenges Faced

- Identifying minor UI inconsistencies across multiple pages
- Ensuring content was displayed correctly on different screen sizes

6. Solutions

- Conducted detailed page-by-page testing and review
- Documented observations and verified corrections after implementation

7. Conclusion

- Successfully completed initial website testing and content validation
- Identified improvement areas to support further refinement and client-specific enhancements
