Day 18 – Route Protection and Dashboard Implementation

1. Objective of the Day

The objective was to strengthen application security by implementing route protection and enhancing the dashboard with authenticated user data.

2. Tasks Performed

- Implemented route protection using authentication guards
- Restricted access to dashboard for unauthenticated users
- Redirected users to login page when access was denied
- Displayed authenticated user details on the dashboard
- Retrieved user data from authentication service
- Verified correct data binding in the dashboard
- Tested access control before and after login
- Implemented secure navigation behavior

3. Tools / Technologies Used

- Angular Framework
- TypeScript
- Angular Routing
- Firebase Authentication

4. Key Learnings

- Route protection ensures secure navigation

- Authentication guards control access to protected routes
- Dashboard personalization improves user experience
- Services provide reliable access to user data
- Authentication state directly affects UI rendering

5. Challenges Faced

- Ensuring correct route restriction behavior
- Managing user data retrieval properly

6. Solutions

- Tested multiple scenarios for route access
- Verified authentication state before rendering dashboard

7. Conclusion

- Successfully implemented route protection
- Enhanced dashboard with user-specific data
