6 Months Training TR-104 Full Stack Development

March, 2026

Day 11 – Introduction to Data Management in Real-Time Project

1. Objective of the Day

The objective of the day was to understand the workflow of a real-time government-based project and the role of data management using Excel and PDF files.

2. Tasks Performed

- Got introduced to the real-time project handled by senior engineers
- Understood the importance of data in chatbot-based systems
- Reviewed multiple Excel and PDF files used in the project
- Analyzed structure and format of raw data
- Understood how data is prepared before being used in applications
- Observed workflow followed by the team for handling data

3. Tools / Technologies Used

- Microsoft Excel
- PDF Documents
- Web Browser

4. Key Learnings

- Real-world projects rely heavily on structured data
- Data preparation is a crucial step before development
- Excel and PDFs are commonly used for storing raw data
- Data management plays a key role in system accuracy

- Team collaboration is important in handling large datasets

5. Challenges Faced

- Understanding the structure of large datasets
- Interpreting unorganized or raw data

6. Solutions

- Reviewed sample data with guidance from senior engineers
- Broke down data into smaller understandable sections

7. Conclusion

- Gained understanding of real-time project data workflow
- Learned the importance of data management in practical applications
