Day 12 – Data Extraction from Excel and PDF Files

1. Objective of the Day

The objective of the day was to extract relevant data from Excel sheets and PDF documents for further processing in the project.

2. Tasks Performed

- Reviewed multiple Excel sheets containing structured and semi-structured data
- Opened and analyzed PDF documents to identify required information
- Extracted relevant data fields such as names, IDs, and project-related details
- Converted unstructured PDF data into structured format manually
- Organized extracted data into Excel sheets
- Ensured accuracy while transferring data between formats
- Worked under guidance of senior engineers for correct extraction process

3. Tools / Technologies Used

- Microsoft Excel
- PDF Reader
- Web Browser

4. Key Learnings

- Data extraction is the first step in data processing
- PDF data often requires manual structuring
- Accuracy is critical during data extraction

- Structured data is easier to manage and use
- Real-world data is often inconsistent and needs cleaning

5. Challenges Faced

- Extracting data from unstructured PDF formats
- Avoiding errors during manual data transfer

6. Solutions

- Carefully verified extracted data multiple times
- Followed a systematic approach for data entry

7. Conclusion

- Successfully extracted and structured data from Excel and PDF files
- Improved understanding of data preparation process
