

6 Months Training TR-104 Full Stack Development

May, 2026

Day 4 – Collaboration Features Testing and Validation

1. Objective of the Day

The objective of the day was to thoroughly test the collaboration features of the CollabNest application and verify their reliability in multi-user scenarios.

2. Tasks Performed

- Tested note sharing functionality between multiple user accounts
- Verified viewer and editor role permissions on shared notes
- Checked real-time synchronization of notes across users
- Tested comments functionality on shared notes
- Verified notification generation for collaborative activities
- Ensured proper access restrictions based on assigned roles
- Documented issues identified during testing and validation

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire

4. Key Learnings

- Collaboration features require extensive multi-user testing
- Role-based access control improves application security
- Realtime synchronization enhances user experience

- Testing helps identify edge cases in collaborative workflows
- Data consistency is critical in shared environments

5. Challenges Faced

- Testing multiple user scenarios simultaneously
- Verifying real-time synchronization accuracy

6. Solutions

- Performed testing using different user accounts
- Validated data updates across multiple sessions

7. Conclusion

- Successfully validated collaboration features and user permissions
- Ensured reliable behavior of sharing and real-time functionalities
