Day 14 – Data Organization and Structuring

1. Objective of the Day

The objective of the day was to organize the cleaned data into a well-structured format for easier management and future usage.

2. Tasks Performed

- Arranged cleaned data into properly labeled columns and rows
- Grouped related data fields together for better clarity
- Ensured consistency in data structure across multiple files
- Organized data based on categories such as users, projects, and related details
- Maintained uniform formatting across all Excel sheets
- Verified that all required data fields were properly aligned
- Prepared data for further processing and tracking

3. Tools / Technologies Used

- Microsoft Excel
- PDF Documents

4. Key Learnings

- Proper data organization improves readability and usability
- Structured data is easier to manage and track
- Consistency across files is important in large projects
- Organized data supports efficient workflow

- Clear structure reduces chances of errors

5. Challenges Faced

- Managing large amounts of data across multiple files
- Ensuring consistency in structure across different datasets

6. Solutions

- Followed a uniform format for all files
- Cross-checked data organization with previous entries

7. Conclusion

- Successfully organized data into a structured format
- Improved clarity and usability of project data
