6 Months Training TR-104 Full Stack Development

March, 2026

Day 1 – Introduction to Admin and User Panel Structure

1. Objective of the Day

The objective of the day was to understand the structure and purpose of the Admin Panel and User Panel within the application.

2. Tasks Performed

- Studied the overall design and working of admin and user panels
- Understood role-based separation between admin and user functionalities
- Analyzed how admin manages users and assigns projects
- Identified key components of admin panel: User List, Add User, Project List, Add Project
- Reviewed user panel functionality for viewing assigned projects
- Understood how authentication determines access to admin and user panels
- Analyzed navigation flow between different panels

3. Tools / Technologies Used

- Angular Framework
- TypeScript

4. Key Learnings

- Admin panel is responsible for managing users and projects
- User panel provides restricted access based on assigned data
- Role-based architecture improves security and usability
- Authentication and authorization work together for access control

- Proper structuring of panels improves scalability

5. Challenges Faced

- Understanding mapping between admin and user functionalities
- Visualizing how data flows between admin and user panels

6. Solutions

- Broke down features into admin-side and user-side responsibilities
- Analyzed workflow step-by-step from login to panel access

7. Conclusion

- Gained a clear and structured understanding of admin and user panel design
- Established a strong foundation for implementing panel functionalities
