Day 3 – User List Component Implementation

1. Objective of the Day

The objective of the day was to implement the User List component to display all registered users in the admin panel.

2. Tasks Performed

- Designed the UI layout for displaying user information
- Connected the component with Firestore to fetch user data
- Retrieved list of users stored in the database
- Displayed user details such as email and user ID in tabular format
- Implemented dynamic rendering using Angular data binding
- Ensured real-time updates reflect in the UI
- Tested user list functionality with existing data

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- TypeScript

4. Key Learnings

- Firestore enables real-time data retrieval
- Angular data binding helps display dynamic content

- Admin panel requires accurate and updated user information
- Proper UI design improves readability of data
- Integration between frontend and database is essential

5. Challenges Faced

- Handling asynchronous data retrieval from Firestore
- Ensuring proper rendering of dynamic user data

6. Solutions

- Used appropriate subscription methods for data fetching
- Verified data binding and UI updates step-by-step

7. Conclusion

- Successfully implemented user list display in admin panel
- Established real-time data flow between Firestore and UI
