Day 7 – User Panel Implementation and Project Display

1. Objective of the Day

The objective of the day was to implement the user panel and display projects assigned to the logged-in user.

2. Tasks Performed

- Designed the user panel interface for displaying assigned projects
- Retrieved logged-in user details from authentication service
- Fetched project data from Firestore
- Filtered projects based on logged-in user ID
- Displayed only relevant projects assigned to the user
- Implemented dynamic data binding for project display
- Ensured real-time updates reflect in the user panel
- Tested user panel with different user accounts

3. Tools / Technologies Used

- Angular Framework
- Firebase Firestore
- AngularFire
- TypeScript

4. Key Learnings

- User panel should display personalized data based on login

- Filtering data is essential for user-specific views
- Authentication data helps identify the correct user
- Firestore enables efficient data retrieval for user panels
- Dynamic UI improves user experience

5. Challenges Faced

- Filtering project data correctly for each user
- Ensuring accurate synchronization between authentication and database

6. Solutions

- Used user ID from authentication to filter project data
- Verified data mapping between projects and users

7. Conclusion

- Successfully implemented user panel with project display
- Enabled users to view only their assigned projects
