6 Months Training TR-104 Full Stack Development

February, 2026

Day 2 – Angular Frontend Workflow and User Interaction

1. Objective of the Day

The objective of the day was to understand how the Angular frontend handles user interactions and communicates with backend services.

2. Tasks Performed

- Studied how users interact with the application through UI
- Analyzed authentication screens such as Signup and Login
- Understood how user inputs are captured through forms
- Tracked how frontend sends user data to backend services
- Explored component-based structure for handling UI logic
- Observed how UI updates based on authentication state
- Studied navigation flow between different application pages

3. Tools / Technologies Used

- Angular Framework
- TypeScript
- HTML & CSS

4. Key Learnings

- Angular manages user interaction and UI rendering
- Forms are used to capture user input
- Components control UI behavior and logic

- Frontend communicates with backend using services
- UI changes dynamically based on application state

5. Challenges Faced

- Understanding how frontend connects with backend services
- Mapping user actions to system responses

6. Solutions

- Analyzed step-by-step interaction flow
- Observed how data moves from UI to backend

7. Conclusion

- Gained clear understanding of frontend workflow
- Understood how Angular manages user interaction and communication
