Day 9 – Integration of Admin and User Panels

1. Objective of the Day

The objective of the day was to integrate the admin and user panels into a unified application flow and ensure smooth interaction between all components.

2. Tasks Performed

- Connected admin and user panel components within the application
- Configured routing for seamless navigation between panels
- Integrated authentication system with panel access
- Ensured admin and user functionalities work independently but within the same system
- Verified data flow between admin operations and user panel display
- Tested navigation from login to respective panels based on roles
- Identified and fixed minor integration issues
- Ensured consistent UI behavior across different panels

3. Tools / Technologies Used

- Angular Framework
- Firebase Authentication
- Firebase Firestore
- AngularFire
- TypeScript

4. Key Learnings

- Integration ensures all modules work together cohesively
- Authentication determines access to different panels
- Data flow between admin and user panels is interconnected
- Proper routing is essential for smooth navigation
- Modular design simplifies integration

5. Challenges Faced

- Ensuring smooth navigation between admin and user panels
- Managing consistent data flow across different modules

6. Solutions

- Tested panel transitions step-by-step
- Fixed routing and data synchronization issues

7. Conclusion

- Successfully integrated admin and user panels
- Established a smooth and unified application workflow
